## Heated Chemiluminescent NO/NO<sub>x</sub> Analyzer

### DESCRIPTION

The California Analytical Instruments Model 600 HCLD NO/NO<sub>x</sub> digital analyzer is designed around a state-of-the-art 16 bit microprocessor. The 16 bit microprocessor control board consists of the MSR-Card with 16 digital inputs, 16 digital outputs, 16 analog inputs and 4 analog outputs. The analyzer can be manually operated from the keypad or remotely via TCP/IP, RS-232C communications and discrete inputs.

The analyzer display includes screen presentation of all analyzer alarms. Four levels of password protection are provided. For precision measurements, the analyzer's accuracy is increased by entering calibration curve fit polynomials.

Automatic calibration may be activated local or remote and includes auto cal via preset times. The analyzer may also display NO, NO<sub>x</sub> and NO<sub>2</sub> via selectable time and hold commands.

### METHOD OF OPERATION

The California Analytical Instruments Model 600 HCLD Analyzer utilizes the principle of chemiluminescence for analyzing the NO or NO<sub>x</sub> concentration within a gaseous sample. In the NO mode, the method is based upon the chemiluminescent reaction between ozone and nitric oxide (NO) yielding nitrogen dioxide (NO<sub>2</sub>) and oxygen. This reaction produces light which has an intensity proportional to the mass flow rate of NO<sub>2</sub> into the reaction chamber. The light is measured by means of a photodiode and associated amplification electronics. In the NO<sub>x</sub> mode, NO plus NO<sub>2</sub> is determined as above, however, the sample is first routed through the internal NO<sub>2</sub> to NO converter which converts the NO<sub>2</sub> in the sample to NO. The resultant reaction is then directly proportional to the total concentration of NO<sub>x</sub>. Sample enters the analyzer directly into a heated chamber and is maintained at an elevated temperature. The moisture will remain in the vapor state, thus ensuring no loss of the NO<sub>2</sub>. Local operation is simplified using the 20 button alphanumeric keypad with data presented on a back lit LCD display. All local operations may be performed remote via RS-232 and/or TCP/IP.
